

# Switch Hitter PRO

## 1 to 4 stations - 1 Wire - 2, 3 or 4 valves

### VH7140 Switch Hitter PRO

The Switch Hitter PRO is 2 products in one. The choice of options is made by the user and by choosing what colour coded cable is connected where. The user can choose in what configuration it is to be used.

The product has two parts: A control box mounted near the irrigation controller or an encapsulated unit at the solenoid valve.

#### Option 1

##### 1 Station - 1 Wire - Up to 4 Valves

In this mode the Switch Hitter PRO works similar to the Automatic Splitter PRO except you can programme different station run times on each station.

In this configuration you have 1 station on the controller programmed with the total run time for all valves.

The Switch Hitter PRO allows you to programme the run time for each valve in the box you install next to the controller. Each valve can have from 1 to 255 minutes run time programmed.

#### Option 2

##### Up to 4 Station - 1 Wire - Up to 4 Valves

In this mode the Switch Hitter PRO works similar to the Add-A-Station PRO except you can have up to 4 different stations connected to the one active cable controlling 4 solenoid valves.

In this configuration you programme each station as if you have 4 active cables. With both options the Switch Hitter Pro automatically senses what stations have valves connected & will only apply time where a valve is connected.

#### TECHNICAL SPECIFICATIONS

##### Power Requirements

- Input - 24VAC, 50 or 60Hz

##### Switching Capacity

- 0.5 Amps, 10VA

##### Life Expectancy

- 50,000 operations

##### Packaging

- Epoxy encapsulated
- Suitable for direct burial

Controller Interface

Valve Decoder
