

HOLMAN**GW1016 PIXEL POT VERTICAL PLANTING KIT**

with Watering Kit included

Thank you for purchasing a Holman Pixel Pot Vertical Garden.

Please keep your receipt as proof of purchase to validate the 1 year product warranty.

Please read this instruction manual prior to use.

GLOSSARY**CONTENT LIST**

- 4x Wall Brackets
- 4x Panels
- 16x Inner Pots
- 12x 5mm Wall Plugs
- 12x 5mm Screws
- 1x 4mmx10m Poly Tube
- 1x Inline Dripper
- 1x End Dripper
- 1x Drip Faucet
- 1x Screw in Hose Adaptor

1. LOCATION

The location of the Pixel Pot determines its success. For the best results we recommend installing your Pixel Pot on North and West facing walls as they generally receive the most light and heat.

However also consider your plant variation as this will also determine your ideal location.

2. DESIGN

Determine how many panels you want to install to achieve your design. The panels can be assembled along the wall running horizontally or vertically.

For the integrated watering system to work with added Pixel Pot kits we suggest introducing drip line every 2nd row.

This will prevent the system getting blocked and will ensure even watering through out the entire GreenWall.

Example: 3 extra Pixel Pot Kits with drip line.

**3. MARKING THE LOCATION**

Hold the bracket to the wall to decide the location. Ensure the bracket is level. With a marker mark the wall through the three holes in the bracket. These marks are your drilling guides.

Repeat this step with every bracket.

**4. DRILLING THE LOCATION**

If the Pixel Pot is going on a solid wall such as brick or concrete we suggest using a 6mm masonry bit to drill the holes.

**5. HANGING THE BRACKETS**

Insert the plastic wall plugs then fix the stainless steel brackets to the wall using the 5mm screws.

**6. ATTACHING THE PANELS**

Hang the panels onto the brackets.

**7. TESTING THE IRRIGATION**

- 1) Connect a garden hose or poly pipe to the hose adaptor.
- 2) Connect a Holman Tap Timer to your tap for automatic watering.
- 3) Attach the other end of the garden hose to the Tap Timer.
- 4) Turn on the water and test the drippers.

**8. CONNECTING THE POTS**

TIP - Plant the pots before connecting them on the panel.

Each pot has a slot for a hook. Place the pot in the panel then turn the pot to "lock" it into position.

**TAP TIMER**

We suggest installing a Holman Tap Timer to automatically and accurately water your GreenWall. Schedule the tap timer to meet your required watering, this will then ensure your plants remain hydrated and healthy and encourage the best result for the growth of your GreenWall.

TROUBLE SHOOTING**Drippers are not working properly**

If some drippers are not working well, you can unscrew them and flush them.

Keeping your plants hydrated

Regularly check that the water is reaching the plants in the lower panels. For even watering you need to ensure that water is flowing through every hole and is reaching every pot.

If a pot is not receiving water try unblocking the holes that the water runs through.

WARRANTY

HOLMAN GreenWall Pixel Pot w/ Watering Kit included

Product Code: GW1016

We will honour all statutory guarantees that this product is of acceptable quality. (Including that it is fit for purpose)
